---

## SWATHER CANVAS . . . THERE IS A DIFFERENCE

Not all Swather canvas is created equal. Here at Legg Company we manufacture what we believe to be the best canvas on the market. We incorporate over 65 years of Swather canvas manufacturing technology in a state of the art facility. Because Legg Company does more than just Swather canvas, we can incorporate technology from various industries into our Swather canvas.

### SPECIAL FEATURES IN LEGG CANVAS:

Legg Company uses a 19 or 25oz S & Z twist 100% Spun Polyester in our Swather canvas. This is the most stable, best tracking fabric on the market. It gives excellent wear, won't rot, and has outstanding dimensional stability.

Legg Swather Canvas utilizes side folds and a center strip for extra strength and increased wear resistance where contact is made with the header structure

THE **S & Z WEAVE** insures the best tracking with the least amount of effort and maintenance. The S & Z fabric is used by high speed sorting equipment, so incorporating this into Swather canvas makes sense due to the traditional tracking problems of Swather canvas.

**All Legg Swather Canvas** utilizes **three** different additives to insure superior oxidation and ozone resistance where most manufacturers use only wax.

**PATENTED OIL RESISTANT** rubber compounds help our canvas stand up against the oil residue left behind by harvesting oily crops such as canola. It also helps the canvas hold up to the grease and oils from the Swather and /or the tractor.

**WE HAVE MORE RUBBER!** Legg was the first manufacture to put additional rubber on the top of the canvas to help prolong it's life . This is especially important in crops with large stems such as canola.

### MACDON® SWATHER CANVAS WITH EDGE V-GUIDE

The Macdon Edge V-Guide can be ordered in a 19oz (standard replacement Swather canvas fabric) or 25oz O.E.M fabric. The bottom V-Guide and top side cleats are integrally molded for superior wear resistance. The Macdon canvas has the same special features as our regular Swather canvas except the Macdon has a V-Guide down the edge.

# Swather/Windrower Drapers

---

## RUBBER SLAT XTRA (RX)

The Rub-R-Slat Xtra is our premium replacement draper for self-propelled or pull type windrowers. 65 years of manufacturing technology combined with an excellent reputation for quality makes this the best draper on the market. With many features you will not find in the competition's draper, Legg's Rub-R-Slat Xtra is your best choice for your windrower needs. The diamond shaped fiberglass rod re-enforced, integrally molded cleats will provide excellent rigidity while delivering years of maintenance free operation. Our diamond rods are specially treated to insure a superior bond to the cleat rubber. Insuring the rod won't work it's way out of the cleat over time.

## RUBBER SLAT XTRA (RS)

This draper incorporates the same technology and quality as the **Rub-R-Slat Xtra** but without the diamond fiberglass rod reinforcement in the center of the cleat. This makes it an ideal choice for bean rowers and other windrowers with full draper support. 19oz Spun Polyester draper fabric makes this an extremely durable product. The S & Z twist makes for quick and consistent tracking.
